# Improving Bookstore Navigation:
# A Usability Study at The Bookish Shop

**Madison Ceriani**
College of Integrative Sciences and Arts, Arizona State University, Polytechnic campus

## INTRO

The Bookish Shop is a woman-owned romance and fantasy bookstore and café.

The goal in assessing its usability is to to identify problem points, and potentially find ways improve this niche business in hopes of retaining its customer base.

This study will evaluate factors such as lighting, layout, and signage.

## METHODS

### Task based testing

- How long it takes to find a specific title
- Observe where test subjects get stuck
- Think-aloud protocol where subjects narrate their thoughts as they browse
- Participants:

- 18-year-old female
- 21-year-old female
- 24-year-old female
- 24-year-old female
- 23-year-old female

## Key Finding

**The most prominent pain point is the**

**LACK OF CLEAR SIGNAGE**

## Results: Observations

**Relied heavily on walking not signage**

**Confusion about the genre contemporary**

**Browsed based on title and genre rather than author.**

## Results

Participants noted the amount of people sitting in chairs reading or working on laptops, expressing an interest in spending time in the establishment beyond the purchasing process. No participants reported issues with the font, but 3/5 requested larger text.

## Conclusion

Overall, the layout of the store is effective. The atmosphere is conducive to buying while still having a welcoming environment where patrons can linger without obligation. The font of the signage is effective, but the placement, wording, and size of the text can be improved.
